EDUCATION

Utah Valley University — *B.S. Computational Data Science* Expected Dec 2026
Relevant Coursework: Machine Learning, Statistical Modeling, Data Structures & Algorithms, Databases, Linear Algebra
Sandbox Accelerator Program — UVU Innovation Hub (Competitive startup accelerator, 1 of ~20 selected) 2024–2025

CERTIFICATIONS

NVIDIA Deep Learning Institute — Building Agentic AI Applications with Large Language Models (2026)

- Designed and deployed multi-step LLM agents with tool use, memory, and retrieval-augmented generation (RAG)

EXPERIENCE

DrawFi — *Software Engineer — Founding Team* Dec 2023 – Present

- Architected and shipped a production fintech platform from 0→1 using Rust, TypeScript, and Supabase
- Engineered secure REST APIs with JWT-based auth and role-based access control (RBAC) serving real users
- Built LLM-powered document intelligence pipeline reducing manual financial review time significantly
- Designed async processing architecture improving system throughput and scalability

Teyka — *Software Engineer* 2025 – Present

- Engineered a payment gateway connecting mobile wallets to global commerce across multiple currencies
- Built high-reliability backend for FX conversion, transaction routing, and cross-border payment orchestration
- Automated operational workflows with n8n, reducing manual intervention in payment processing

PML — *Software Engineer* 2025 – Present

- Developed backend infrastructure for a financial identity and credit-scoring platform
- Implemented machine learning-informed scoring models and production-grade API layer

FinTech Center — UVU — *Program Assistant* 2026 – Present

- Collaborated on AI and fintech research initiatives with industry and academic partners
- Managed event logistics and maintained analytics dashboards tracking program KPIs

Wolverine Fund — UVU — *Associate — Investment Analyst* 2025 – Present

- Screened and evaluated early-stage startups across AI, SaaS, and fintech for investment potential
- Produced market research reports and due diligence memos to support fund decisions

E2i — *Project Manager* 2022 – 2023

- Directed cross-functional engineering teams to deliver software projects on time and within scope
- Owned stakeholder communication, sprint planning, and risk management across multiple workstreams

PROJECTS

Agentic AI Systems — Production-grade LLM agents with RAG pipelines, multi-step reasoning, and external tool integration
AI Copilot (DrawFi) — Intelligent financial assistant automating document workflows and supporting AI-driven decisions
More projects, live demos & source code: banzachretien.info

TECHNICAL SKILLS

Languages: TypeScript, Rust, Python, SQL **AI/ML:** LLMs, RAG, Agentic AI, NLP, Supervised Learning
Backend: REST APIs, Auth Systems, Async Processing **Data:** PostgreSQL, Supabase, Data Pipelines
Frontend: React **Automation:** n8n, Workflow Orchestration **Languages:** English, French
