

CHRETIEN BANZA

Computational Data Science · AI / ML · Full-Stack Engineer

Orem, UT · (385) 309-9975 · chretienbanza1@gmail.com

banzachretien.info · github.com/Chretienb · linkedin.com/in/chretien-banza

Full-stack engineer who ships AI products 0 → 1. Built production fintech and AI-native audio platforms across Rust, TypeScript, and Python — from LLM/RAG pipelines to real-time audio ML. Founding engineer on multiple live products serving real users.

EDUCATION

Utah Valley University — B.S. Computational Data Science

Expected May 2027

Relevant Coursework: Machine Learning, Statistical Modeling, Data Structures & Algorithms, Databases, Linear Algebra, Causal Inference, Software Testing, SOLID Design Principles

Sandbox Accelerator Program — UVU Innovation Hub

2024 – 2025

Competitive startup accelerator, 1 of ~20 selected

PROJECTS & CERTIFICATIONS

Agentic AI Systems — production-grade LLM agents with RAG pipelines, multi-step reasoning, and external tool integration

AI Copilot (DrawFi) — intelligent financial assistant automating document workflows and AI-driven decisions

NVIDIA Deep Learning Institute — Building Agentic AI Applications with LLMs (2026)

Stanford d.school — Design Thinking (University Innovation Fellows, 2022–2023)

Live demos & source: banzachretien.info

EXPERIENCE

Dizko — Software Engineer, Founding Team

2025 – Present

- Built an audio ML pipeline (Demucs + YAMNet) for automatic stem separation, classification, and naming
- Shipped AI-assisted mixing (smartBounce), per-stem transposition, and automated mastering
- Architected the stack: React + Vite, Hono + Bun, Supabase (Postgres/auth), Cloudflare R2 audio storage

DrawFi — Software Engineer, Founding Team

Dec 2023 – Present

- Architected and shipped a production fintech platform 0 → 1 in Rust, TypeScript, and Supabase — now in a signed pilot with a major US bank
- Built an LLM-powered document intelligence pipeline; secured REST APIs with JWT auth and RBAC
- Designed async processing architecture improving throughput and scalability

Teyka — Software Engineer

2025 – Present

- Engineered a cross-border payment gateway: mobile wallets, FX conversion, multi-currency transaction routing
- Automated payment-processing workflows with n8n, reducing manual intervention

Wolverine Fund / FinTech Center — UVU — Investment Analyst

2025

- Screened early-stage AI/SaaS/fintech startups; ran AI + fintech research and KPI dashboards

E2i — Project Manager

2022 – 2023

- Directed cross-functional engineering teams; owned sprint planning, stakeholder comms, and risk management

TECHNICAL SKILLS

Languages: TypeScript, Rust, Python, SQL

AI/ML: LLMs, RAG, Agentic AI, NLP, Supervised Learning, Audio ML (Demucs, YAMNet)

Backend & Data: REST APIs, Auth/RBAC, Async Processing, Hono, Bun, PostgreSQL, Supabase, Cloudflare R2

Frontend & Automation: React, Vite, n8n

Spoken Languages: English, French
